Are computer games

bad for you?

1 Playing computer games is one of the most popular free-time activities for young people, but experts say that playing for hours and hours can damage your health. Some young people who play computer games a lot don't get enough exercise. And they often eat junk food while they play. They put on weight and sometimes become obese. 'If children exercised more instead of playing computer games, we wouldn't have a problem with teenage obesity,' says fitness expert Edwin Rice.

2 Obesity is not the only problem. After playing for a long time, players' fingers and hands can hurt. 'If players took regular breaks, their hands wouldn't hurt so much,' says physiotherapist Anthony Harper. 'You shouldn't play for hours and hours without a rest. You should relax your fingers and hands every 30 minutes.'

3 Sitting incorrectly in front of the computer or TV screen sometimes gives you backache and a sore neck or shoulders. 'People wouldn't have these problems if they sat correctly,'

says back expert Sandra Westwood. 'You should keep your back straight and sit at the correct distance from the screen. People who sit too near the screen often get headaches and damage their eyes.'

4 But not everybody has a negative opinion of computer games. Some computer games require players to simulate a sport, for example skiing, dancing, bowling, playing tennis, basketball, and baseball. Experts agree that these types of game are good for young people and can improve their fitness. 'If

kids didn't play these computer games, they'd watch more TV and that's worse for their health!' says psychologist Robert Gibbon. 'You shouldn't spend all your free time in front of a computer or TV screen. You should do different activities, not just playing computer games!'
